## FF80 125A Three Phase Industrial Heater

### Specifications at a glance

- 80kW of safe, fume free, warm air
- Up to 6000 M3/hr airflow
- Adjustable heat and airflow
- Touch screen control
- Chassis mount and remote thermostat control
- Can be used to maintain room temperature, airflow or delta T
- Remote thermostat included
- Castors, lifting eyes and forklift pockets
- All steel construction
- Outlet spigot

The latest addition to our Mighty Heat range is the FF80, a category leading 80kW heater capable of delivering massive volumes of warm air.

Manufactured here in the UK, the FF80 is designed and built to withstand the rigors associated with industrial use. With a powerful backward curved impeller housed in an all steel chassis, the FF80 is an industrial heater that delivers 80kW of dry, safe, fume free heat at up to 6000m<sup>3</sup> /hr against a pressure drop of 600 Pa. With this sort of performance the FF80 is capable of ducting warm air great distances, allowing it to deliver heat whilst being positioned remotely.

Full electronic control from a user friendly touchscreen allows the user to easily adjust the airflow or delta T to suit the specific requirements of the application or switch between the chassis mounted thermostat or a remote thermostat, while a host of over temperature features ensure the unit runs safely.

The onboard computer also alerts users when an incorrect shutdown procedure has been carried out too, a useful feature when the units are part of a hire fleet. Fitted with large, locking castors and built around a welded steel chassis which includes lifting eyes and forklift pockets the FF80 is an easily manoeuvrable machine that also comes with a 600MM spigot as standard.
