

 SA CYCLONE[®]

ANTISTATIC DUCT SYSTEM
SAFD

VENTILATES SAFELY, FOR INCREASED CONTROL.

The SA CYCLONE anti-static duct system is highly flexible ducting designed to enable you to create a safe ventilation system for use in ATEX zones 1 and 2.

Carefully selected materials and a robust design combine to deliver safety against electrostatic discharge and preventing the ignition of explosive gases. Constructed from anti-static reinforced polymer these ducts are durable, heavy-duty and flame retardant, with an integrated steel helix wire along the length of the ducting to keep the duct wide open allowing air to flow freely.

The integral ducting bag enables fast and easy compacting for improved transport and storage of the product. Our SA CYCLONE ducting is suitable for use across industrial sites, oil refineries, offshore platforms, shipping and confined space working.
