Air Boss® T- Series Models

How it Works

The Trion® T-Series utilizes the principle of Electrostatic Precipitation. Air is drawn by the motor/blower through a washable metal mesh pre-filter which traps large dust particles. The remaining particles, some as small as 0.01 microns, pass into a strong electrical field (ionizing section) where the particulate receives an electrical charge. The charged particles then pass into a collector plate section made up of a series of equally spaced parallel plates. Each alternate plate is charged with the same polarity as the particles, which repel, while the interleaving plates are grounded, which attract and collect.

T Series Configurations - Stated m³/h rates up to 95% DOP Efficiency

- » Orientation of units shown below is with grille to the front.
- » Airflow is usually Right to Left (as viewed when facing door), but Left to Right handling is available.
- » Units of opposite orientation may be stacked side by side to double overall airflow capacity.
