

## DI-16

### DOSING PUMP

Proportional batcher for the HIDRO-IC product dosing. Inflow from 0,02 l/h up to 40 l/h. It does not need electricity, since it operates by means of a motor piston driven by the water that flows inside of it.

## OXIDANT PREVENTION

### DOSING PUMP

This dosing pump is designed for dosing the HIDRO-IC product in the water introduced in the evaporative coolers. It has an electronic circuit that times the doses according to the features of the coolers installed.

## HIDRO-IC INHIBITOR

Le purificateur HIDRO-IC est un produit liquide qui agit comme anti-incrustant et évite la corrosion dans les circuits des rafraîchisseurs par évaporation, maintient les panneaux humidificateurs en bon état et prolonge leur vie utile, augmente l'efficacité du système. Rétablit les valeurs de chlore libre pour son contenu en hypochlorite et contrôle ainsi la croissance des microorganismes comme la légionellose.

## UV LAMPS

The disinfection advantages of the liquids through the UV light, they are the not residues release, the not alteration of the composition or physical sensory properties. This system has a low installation cost, it has a big disinfection power with a low energy consumption, and an easy maintenance that is only the lamps replacement.
